

SenSource Solutions for Occupancy & Space Management

Why Use Vea Software for Space Management

Make better business decisions to operate at peak performance while maintaining building code regulations. Measuring and analyzing the movement and flow of people in an event space can be a struggle when multiple schedules overlap. SenSource Vea Analytics Software alleviates some of the pressure by integrating with unlimited data sources, allowing you a full view of your facility's operations.

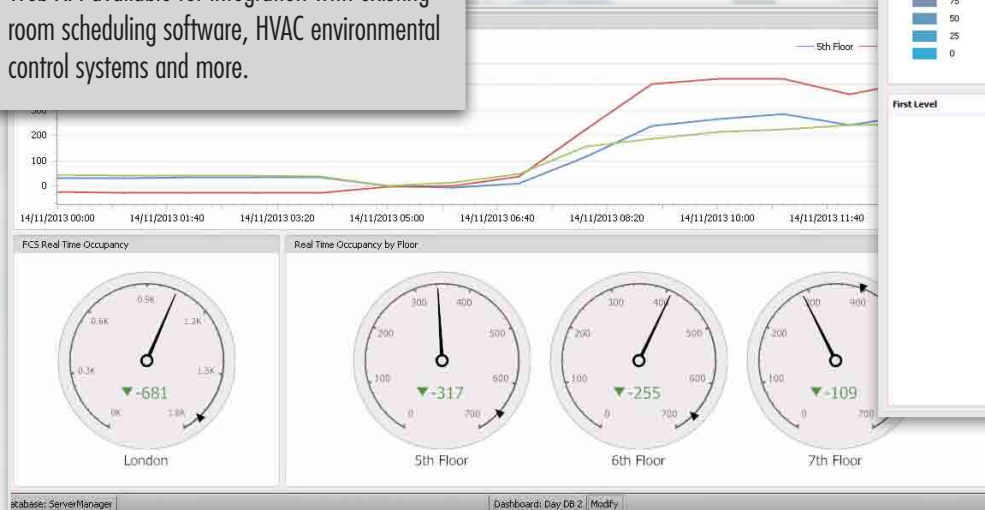

Knowing the details of your space usage allows for planning of different event types, determining when to make changes or expansions, abiding by occupancy regulations and fire codes and maintaining green initiatives such as HVAC control.

Better Decisions Start Here

- > Record event intelligence
- > Optimize facility usage
- > Monitor traffic patterns
- > Justify real estate expenditures

VEA ANALYTICS & REPORTING

Web API available for integration with existing room scheduling software, HVAC environmental control systems and more.
